English - Professional Proficiency (C2) | Swedish - Limited Working Proficiency (B1)

Summary

Applied AI and ML Engineer with experience designing enterprise AI systems, machine learning models, and computer vision solutions. Skilled at translating ambiguous business problems into deployable AI applications across logistics, enterprise automation, and autonomous systems. MSc. in Statistics & Machine Learning, Linköping University.

Experience

Master's Thesis Researcher | *PostNord Group AB* | *Stockholm, Sweden* *January 2026 – Present*

- Reframed parcel dwell-time prediction as a **survival-analysis** problem for a network of **~6,000+** parcel lockers handling **~12 M+** annual deliveries.
- Built an end-to-end modelling pipeline with feature engineering, model benchmarking, and hyperparameter optimization.
- Evaluated **feature importance** to support the target of increasing locker utilization from **1.25x** to **2.25x**.

AI Intern | *TCS Sverige AB* | *Stockholm, Sweden* *July 2025 – June 2026*

- Translated business workflows across **5** departments into **4** Copilot agents automating repetitive tasks.
- Co-designed an **AI maturity assessment framework** across **7** business domains, defining evaluation criteria to identify **high-value** AI opportunities.
- Deployed an **AI-assisted** SDLC framework, demonstrating AI-driven **software engineering workflows** for client engagements.
- Built a reusable camera calibration pipeline for vision-guided robotic automation using AI-assisted development.

Computer Vision Engineer | *LiU Formula Student* | *Linköping, Sweden* *September 2024 – June 2025*

- Designed a **90%+** accurate **perception pipeline** for a Formula Student autonomous robot car for **YOLO**-based cone detection.
- Provided vehicle position information for downstream navigation, supporting **successful** camera-based autonomous **vehicle testing**.

Intern | *PostNord Group AB* | *Stockholm, Sweden* *July 2022 – May 2023*

- Built and deployed a **90%** detection accuracy computer vision pipeline for **real-time parcel-drop detection** on operational camera feeds.
- Trained a custom **YOLOv8** model for cage detection and implemented **GDPR-compliant** person-masking on top of distortion correction for reliable tracking.

Skills

Programming Languages: Python, R, C++, SQL

Machine Learning Frameworks: PyTorch, TensorFlow, scikit-learn, OpenCV

LLM and Agentic AI: LangChain, RAG architectures (Naïve, Reranking), Harness, Prompt and Context Engineering, MCP

Cloud and Deployment: GCP, AWS, Docker

Data: Pandas, NumPy, PySpark, Vector Databases (Qdrant, ChromaDB)

Web: FastAPI, Node.js, React, REST APIs

Education

Linköping University, Linköping, Sweden *Aug 2024 – June 2026*

Master of Science in Statistics and Machine Learning

KTH Royal Institute of Technology, Stockholm, Sweden *Aug 2023 – June 2024*

Coursework in Computer Science and Artificial Intelligence

Vishwakarma Institute of Technology (Affiliated with University of Pune), Pune, India *August 2019 – May 2023*

Bachelor of Technology in Electronics and Telecommunication Engineering

Publication
